

Sean Fuller

King of Prussia, Pennsylvania

267-274-7857 • seanf1018@yahoo.com • [LinkedIn](#) • sfuller11.github.io

Professional Summary

Full-stack Software Engineer experienced in developing, supporting, and securing enterprise-level web applications using C#, JavaScript, SQL Server, as well through utilizing AI models such as Microsoft Copilot/Claude Code. Strong foundation in object-oriented programming, UI/UX design, Agile/DevOps project management, and cybersecurity. Proven ability to refactor legacy systems, eliminate technical debt, and drive proactive process improvements.

Education

Temple University, College of Science and Technology — Philadelphia, Pennsylvania

Bachelor of Science in Information Science and Technology Computer Security and Digital Forensics

Certification GPA 3.6 out of 4.0

Dean's List - Distinction in Major

Technical Skills

Languages: C#, JavaScript (ES6+), HTML5, CSS3, SQL, Ruby on rails

Frameworks/Libraries: .NET Framework, .NET Core 3-9, ASP.NET, jQuery, Entity Framework, React, Vue, Spring Framework

Databases: Microsoft SQL Server, MongoDB

APIs/Tools: RESTful APIs, JSON, Postman, Microsoft Graph API, OAuth2, Microsoft Copilot AI, Claude Code, prompt engineering. Wireshark

Cloud & DevOps: Azure (AD, MFA), CI/CD pipelines, AWS (S3, EC2, Lambda), Docker, Kubernetes

Agile & Collaboration: Agile/Scrum, Git/GitHub

Professional Experience

Software Engineer

Universal Health Services (UHS), King of Prussia, PA

June 2022 – Present

Item Request Platform (Procurement System Modernization)

- Led modernization of critical Item procurement platform from .NET Framework 4.7 Web Forms to .NET 9, improving reliability and reducing user errors across 90+ facilities processing 150+ requests daily.
- Enhanced and normalized SQL database structures to support multi-user request handling.
- Designed improved UI and workflow logic, reducing end-user mistakes and increasing request throughput.
- Automated aspects of supply chain reporting utilizing SQL + SSRS and excel file uploading, saving analysts ~2 hours daily.
- Built CI/CD workflows in GitHub to automate IIS deployments, reducing off-hour deployment time.

Mailbox Request Platform (Delegated Access Application)

- Led development of an application enabling delegated Outlook/OneDrive access using Azure AD, Microsoft Graph, PowerShell, and C#.
- Collaborated across engineering teams, QA, and business stakeholders while facilitating Agile sprint cycles to deliver enterprise features.
- Enhanced and normalized SQL database to handle multi-user access delegation
- Added Out-of-Office message handling using Summernote and integrated PowerShell automation for updating user account settings.
- Designed actionable email card notifications using SQL and Microsoft Graph API, enabling secure request approvals directly from email, increasing approval speed and accessibility.
- Refactored legacy REST APIs and history logging, reducing technical debt and improving maintainability.

Security & Identity (Azure AD, MFA, Keys, Compliance)

- Implemented MFA and Azure Active Directory authentication across multiple applications and frameworks and documented/helped teammates as part of a major security initiative.
- Created, updated, and stored application security keys for multiple applications, verifying users local identity within Azure AD when accessing web applications.
- Built CI/CD workflows through Github for automating web application deployments to IIS server, saving off hour deployment time.
- Utilized CodeQL and Dependabot to maintain application security posture and dependency hygiene.

AI & Automation (Copilot, Claude, Knowledge Agents)

- Utilized Microsoft Copilot to research and build Graph API integrations using the newest command sets.
- Applied prompt engineering techniques to accelerate development, debugging, and demo creation.
- Leveraged Claude Code to automate SQL updates for a Workday ERP upgrade, generating thousands of record updates, test scripts, history logs, and backup table operations.
- Used Copilot code review features in GitHub to evaluate AI-suggested changes and merge improvements based on internal documentation and system knowledge.
- Built general knowledge agents using Copilot Studio, training AI chat models on internal documentation and external libraries (ChatGPT, Copilot, Grok) to improve user experience and response accuracy.

Software Engineer Intern

Universal Health Services (UHS), King of Prussia, PA

June 2021 – December 2021

- Built a new application and API for identifying and grouping vendors using .NET Core, JavaScript, and SQL.
- Analyzed, replicated, and refactored existing codebases.
- Developed APIs for loading vendor data into a major financial enterprise application.

Associate Client Services Representative

The Hibbert Group, Trenton, NJ

May 2019 – August 2020

- Managed pharmaceutical orders with accuracy and timeliness.
- Communicated directly with clients to validate requests and document requirements.
- Updated and maintained client product specifications in company databases.
